

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem VI
Course Code	6ME376
Course Name	Robotics Lab
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Practical	2 Hrs./Week	LA1	LA2	Lab ESE	Total
Interaction	—	30	30	40	100
Credits: 1					

Course Objectives

1	To deliver the knowledge of advance concepts and implementation of Industrial Automation and Robot programming.
2	To provide the basic understanding of Hydraulic and Pneumatic systems, SCADA and DCS systems and Robotics systems use in modern industries.
3	To acquire knowledge of various power systems in industries, Industrial distribution systems, buses, protocols, Electrical controls of motors etc.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Estimate continuous-time control using software for the manipulation, transmission, and recording of data.	IV	Analyze
CO2	Decide suitable actuators and sensors and integrate them with embedded control systems.	V	Evaluate
CO3	Design static and dynamic logic systems used for combinational, synchronous and asynchronous sequential logics.	VI	Create

List of Experiments / Lab Activities/Topics

List of Lab Activities: (10 experiments from the list given below)

1. Various features of Gripper system in Robot
2. Various Robot programming parameters
3. Robot programme for simple pick and place
4. Robot programming for complex pick and place
5. Robot programming for simple palletization
6. Robot programming for complex palletization
7. Robot programming for colour based object identification
8. Robot programming for shape based object identification
9. Robot programming for comparison of two or more jobs
10. Study, designing system and demonstration of robot anatomy
11. Study, designing system and demonstration of various drive systems used in robotics
12. Study, designing system and demonstration of various sensors used in robot

CO-PO Mapping														
	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1		2											2	2
CO2				3									1	1
CO3			3						3					

The strength of mapping is to be written as 1,2,3; where, 1: Low, 2: Medium, 3: High
Each CO of the course must map to at least one PO, and preferably to only one PO.

Assessment				
There are three components of lab assessment, LA1, LA2 and Lab ESE.				
IMP: Lab ESE is a separate head of passing.(min 40 %), LA1+LA2 should be min 40%				
Assessment	Based on	Conducted by	Typical Schedule	Marks
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 8 Marks Submission at the end of Week 8	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 9 to Week 16 Marks Submission at the end of Week 16	30
Lab ESE	Lab activities, journal/ performance	Lab Course Faculty and External Examiner as applicable	During Week 18 to Week 19 Marks Submission at the end of Week 19	40

Week 1 indicates starting week of a semester. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming, and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments and related activities if any.

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. VI
Course Code	6ME377
Course Name	Internal Combustion Engines Lab
Desired Requisites:	

Teaching Scheme

Practical	2Hrs/Week	LA1	LA2	Lab ESE	Total
Interaction		30	30	40	100
Credits: 1					

Course Objectives

1	To study Engines performance parameters such as BMEP, Torque, BSFC and their relationship to operating conditions.
2	To study Ideal air standard cycles and fuel/air cycles.
3	To understand roll of Parameters affecting volumetric efficiency, valve timing, port design.
4	To know about Turbocharging: compressor and turbine performance, matching components, introduction to impeller design.
5	To study combustion Processes in both spark and compression ignition engines: flame structure, cycle-to-cycle variation, knock, ignition, fuel injection, octane number, ignition delay, cetane number.
6	To study Emissions: NOx, CO, UHC, Smoke, and Catalic converters.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Understand the Basics of engine construction and working of 2 strokes, 4 stroke petrol and diesel engines.	III	Applying
CO2	Analyze the heat balance sheet of 4 stroke petrol and diesel engines by taking trials.	IV	Analysing
CO3	Evaluate the performance of computerized multi cylinder 4 stroke engine.	V	Evaluate

List of Experiments / Lab Activities/Topics

List of Lab Activities:

Term work shall contain any 5 to 6 experiments from following list :

Study group:-

1. Constructional details of I.C. Engines
2. Dismantling and assembly of I.C. Engine.
3. Study of Engine air inlet, exhaust, cooling and lubrication systems.
4. Study of Ignition system and starting system.
5. Study of carburetor and petrol injection system.
6. Study of fuel injection system of diesel engine.

Test group:-

7. Test on slow speed diesel engine.
8. Test on high speed diesel engine.
9. Test on variable speed four stroke petrol engine.
10. Morse test on multi cylinder engine.
11. Test on computerized I.C. engine test rig.
12. Measurement of I.C. engine emissions.

Lab ESE	Lab activities, journal/ performance	Lab Course Faculty and External Examiner as applicable	During Week 10 to Week 12 Marks Submission at the end of Week 12	40

Week 1 indicates starting week of a semester. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming, and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments and related activities if any.

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem VI
Course Code	6ME378
Course Name	Industry 4.0 Lab
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Practical	2Hrs/week	LA1	LA2	Lab ESE	Total
Interaction	—	30	30	40	100
Credits: 1					

Course Objectives

1	To provide the knowledge of Fourth Industrial Revolution which is very much driven by the smartness in automating decision making and processes.
2	To provide a comprehensive coverage on, among others, the role of data, manufacturing systems, various Industry 4.0 technologies, applications and case studies.
3	To draw input from researchers and practitioners on what are the opportunities and challenges brought about by Industry 4.0, and how organizations and knowledge workers can be better prepared to reap the benefits of this latest revolution.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Explain various revolutions going on in industrial automation and manufacturing.	II	Understanding
CO2	Able to outline the various systems used in a manufacturing plant and their role in an Industry 4.0 world.	IV	Analyze
CO3	Use integration of data with manufacturing system effectively.	V	Evaluate

List of Experiments / Lab Activities/Topics

List of Topics (Applicable for Interaction mode):

1. Predictive Maintenance Optimization
2. Industrial Internet of Things
3. Cloud Manufacturing,
4. Digital Twin
5. Cyber security
6. Virtual/ Augmented Reality
7. Human-Robot Collaboration Optimization
8. Big Data and Analytics
9. Autonomous Robots
10. Cybersecurity in Industrial Control Systems
11. Additive Manufacturing Process Optimization
12. Smart Manufacturing

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. VI
Course Code	6ME336
Course Name	Basics of Automobile Engineering
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs./week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

1	To make students familiar with various basic of Engine and modern automobile.
2	To introduce the mathematical treatments required for vehicle performance and for some of important systems such as steering system and brake system.
3	To make students aware about latest trends in transportation towards a safe, pollution free and fully automatic vehicle.
4	To empower students to face the real life automotive usage with greater confidence.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Comprehend about I C Engines, various automotive systems, components and recent trends in automotive systems.	II	Understand
CO2	Apply vehicle dynamics concepts to investigate influence of various parameters in automotive system.	III	Applying
CO3	Analyze acceleration, barking and steering performance of a vehicle in different driving conditions.	IV	Analyze

Module	Module Contents	Hours
I	Introduction, classification, Types of I C Engine. Engine cycles, Combustion in SI & CI engines, Supercharging & emission control techniques, Engine performance parameters.	6
II	Introduction, classification and Automotive power plants Introduction, Broad classification of Automobiles. Major components and their functions. Types of vehicle layouts, Types of bodies. Requirements of automotive power plants, Comparison and suitability considerations. Engine cycles.	6
III	Vehicle Performance Resistance to vehicle motion, Air, Rolling and Gradient resistance, Acceleration, Gradeability and draw bar pull, Traction and Tractive effort, Distribution of weight, Power required for vehicle propulsion, Selection of gear ratio, Rear axle ratio.	8
IV	Electric and Hybrid Electric vehicles Classification and working of Electric and Hybrid vehicles, Design	6

	considerations, Electric and Hybrid vehicles- Layout, advantages and limitations. Present scenario of Electric vehicles, issues and challenges in the Electric Vehicle.	
V	Transmission System ,Suspension, Steering, Braking and Electrical System Automobile clutch requirements, Types & functions - clutches, gearboxes, construction and Working, Principle of operation of automatic transmission, Torque converter, Epicyclic gear train, Propeller shaft, Universal joint, Final drive, Differential, Rear axles. Suspension requirements, Sprung and Unsprung mass, Types of automotive suspension systems. Function of steering, Steering system layout, Automotive steering mechanism, Types of steering gear boxes, , Types of braking mechanism, Calculation of braking force required, stopping distance and dynamic weight transfer Automotive batteries, Automotive electric systems, Engine electronic control modules, Safety devices.	8
VI	Recent trends in Automotive Development NVH and crashworthiness of vehicles, Emission norms and control, Testing and certification of vehicles. Introduction to Electric and Hybrid power trains.	5

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Walchand College of Engineering, Sangli
(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem VI
Course Code	6ME380
Course Name	H-2 Project Management
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Lecture	-	LA1	LA2	Lab ESE	Total
Interaction	2 Hour/week	30	30	40	100
Credits: 2					

Course Objectives

1	To prepare the students to manage projects by exploring both technical and managerial challenges and preparing the budget.
2	To make aware the students about leadership and ethical qualities in dealing with real life project
3	To induce qualities for working in interdisciplinary and cross functional teams with effective communication skills, economical and managerial challenges and commercial management.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Grasp and perceive the project activities with respect to resources and constraints of feasibility or completion time	II	Understanding
CO2	Estimate and prepare budget for project completion and commercial management	IV	Analyzing
CO3	Figure out and schedule the project and assess for controlling critical path networks	V	Evaluating

Contents

Module	Module content	Hours
1	Introduction to Project Management. Phases in the life cycle of projects and their significance, characteristics of projects from conventional organizations, objectives of the project and interdependence of cost on schedules	4
2	Project Cost, Planning, feasibility, risk. Controlling Schedules, Cost, specifications or quality, Monitoring both the cost and schedule of a project in financial terms, Baseline Cost Curves and their significance in the overall project cost impact	4
3	Critical Path Networks - Principles of Resource Scheduling.	4

	Numeric Models of Project, Non-Numeric Models of Project, Scoring Models of Project, Project Network and CPM, Gantt Charts, Resource allocation and Controlling phases of a project	
4	Executing and Controlling. Audit schedules and auditing a project and identifying deviations, quality needs in a project, applying relevant quality tools in a project and interpreting the results of the tools to monitor the quality Commercial Management and various regulations. Potential risks in a project, Categorizing of project risks, and defining the strategies for managing the project risks	4
5	Study and use of software related to Project Management System.	3
6	Human Values and Professional Ethics Need, basic guidelines, content & process for value education, understanding harmony in the human being- harmony in myself, understanding harmony in the family & society- harmony in human relationship, understanding harmony in the nature & existence, implications of the above holistic understanding of harmony on professional ethics.	7

Assessment	Based on	Conducted by	Typical Schedule	Marks
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 8 Marks Submission at the end of Week 8	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 9 to Week 16 Marks Submission at the end of Week 16	30
Lab ESE	Lab activities, journal/ performance	Lab Course Faculty and External Examiner as applicable	During Week 18 to Week 19 Marks Submission at the end of Week 19	40

Week 1 indicates starting week of a semester. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming, and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments and related activities if any.

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. V
Course Code	6ME301
Course Name	Heat Transfer

Desired Requisites:

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

1	To introduce the various mechanisms of heat and mass transfer that characterizes a given physical system.
2	To make the students familiarize conservation equations along with models for heat transfer processes.
3	To prepare the students for analysis of one-dimensional steady and unsteady partial differential equations.
4	To train the students to develop representative models of real-life heat transfer processes and systems

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Demonstrate the basic laws of heat and mass transfer and compute heat transfer rates.	III	Applying
CO2	Analyze problems involving steady and transient state heat transfer.	IV	Analysing
CO3	Assess the performance of thermal systems under different operating and geometrical conditions.	V	Evaluating

Module	Module Contents	Hours
I	Introduction Introduction to Heat transfer, difference between thermodynamics and heat transfer, modes of heat transfer. laws of heat transfer, thermal conductivity coefficient of heat transfer and Boiling & Condensation (Theory part)	4
II	Conduction Simple steady state problems in heat conduction, concept of thermal resistance and conductance. General equation of temperature field in three dimensional Cartesian coordinate systems. Application of above (one dimensional case) equation to the system of plane wall (including composite structure) as well as to the system with radial heat conduction i.e. cylinders and Sphere (including composite structures). Steady state conduction one dimensional) through extended surface (fins) of constant cross section. One dimensional steady state heat conduction with uniform heat generation, (plane wall and solid cylinder) critical radius of insulation. Concept of unsteady state heat conduction. Transient heat flow system with negligible internal resistance	9
III	Radiation Nature of thermal radiation, definitions of absorptivity, reflectivity, transmissivity, monochromatic emissive power, total emissive power and emissivity, concept of black body and gray body, Kirchhoff laws, Wien's law and Planck's law, deduction of Stefan Boltzmann equation. Lambert's cosine rule, intensity of radiation, energy change by radiation between two black surfaces with non-absorbing medium in between and in absence of reradiating surfaces, geometric shape factor, energy	9

	exchange by radiation between two gray surfaces without absorbing medium and absence of radiation and radiosity, radiation network method, network for two surfaces	
IV	Free Convection Mass, momentum and energy conservation equations, non-dimensional numbers, hydrodynamic and thermal boundary layers, basics of heat transfer in external and internal laminar and turbulent flows, and use of co-relations. Free Convection and use of its co-relations	6
V	Forced Convection External flow: Thermal analysis of Flow over flat plate, cylinder, sphere and flow across tubes. Internal flow: Convection correlations, Hydrodynamic and thermal considerations, thermal analysis and convection correlations for circular and non-circular tubes.	6
VI	Heat Exchangers Exchangers, Tubular heat exchangers, Extended surface heat exchangers. Classification according to flow arrangement. Fouling factor, mean temperature difference, LMTD for parallel flow, counter flow, mean temperature for cross flow, correction factor, and special cases. The effectiveness by NTU method, effectiveness of parallel, counter flow and cross flow heat exchangers and design consideration. Heat pipe component and working principle.(Elementary treatment only) Types of Heat exchangers	5

CO-PO Mapping

	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1			3									1		
CO2	1	2		3									2	2
CO3			3								2		2	

The strength of mapping is to be written as 1: Low, 2: Medium, 3: High

Each CO of the course must map to at least one PO.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. V
Course Code	6ME302
Course Name	Applied Thermodynamics
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

- 1** To learn about gas and vapor cycles and their first-law and second-law efficiencies
- 2** To learn about gas dynamics of airflow
- 3** To learn about compressors with and without inter-cooling.
- 4** To analyze the performance of steam turbines.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Understand various practical power cycles.	II	Understanding
CO2	Recognize phenomena occurring in high-speed compressible flows.	III	Applying
CO3	Analyze energy conversion in various thermal devices such as steam turbines and compressors.	IV	Analyzing

Module	Module Contents	Hours
I	Combustion Introduction to solid, liquid, and gaseous fuels – stoichiometry, exhaust gas analysis – the first law analysis of combustion reactions- heat calculations using enthalpy tables – adiabatic flame temperature.	4
II	Vapor Power Cycles Revision of basic Rankine Cycle. Rankine cycle with superheating, reheat, and regeneration. Numerical treatment.	8
III	Gas Power Cycles Air standard Otto, Diesel, and Dual cycles, Air standard Brayton cycle, the effect of reheat, regeneration and intercooling	8
IV	Compressible Flow Basics of compressible flow, stagnation properties, Isentropic flow of a perfect gas through a nozzle, choked flow, subsonic and supersonic flows- normal shocks- use of ideal gas tables for isentropic flow and normal shock flow	5
V	Compressors Reciprocating compressors: construction, work input, the necessity of	7

	<p>cooling, isothermal efficiency, heat rejected, the effect of clearance volume, volumetric efficiency, the necessity of multistage, optimum intermediate pressure for minimum work required, after cooler, free air delivered, air flow measurement, capacity control.</p> <p>Rotodynamic Air Compressors: Centrifugal compressor, velocity diagram, theory of operation, losses, adiabatic efficiency, effect of compressibility, diffuser, pre-whirl, pressure coefficient, slip factor, performance.</p>	
VI	<p>Steam Turbines Types of steam turbines, Analysis of steam turbines, velocity and pressure compounding of steam turbines. Numericals on steam turbines.</p>	7

Course Information										
Programme	B. Tech. (Mechanical Engineering)									
Class, Semester	Third Year B. Tech., Sem. V									
Course Code	6ME351									
Course Name	Heat Transfer Lab									
Desired Requisites:										
Teaching Scheme		Examination Scheme (Marks)								
Practical	2Hrs/Week	LA1	LA2	Lab ESE	Total					
Interaction	-	30	30	40	100					
Credits: 1										
Course Objectives										
1	Introduce the various mechanisms of heat and mass transfer that characterizes a given physical system.									
2	Formulate conservation equations along with models for heat transfer processes and use of analytical to solve one-dimensional steady and unsteady partial differential equations.									
3	To develop representative models of real processes and systems and draw conclusions concerning process/system design or performance from attendant analysis.									
4	To develop a professional approach to lifelong learning in design of some thermal systems to include the awareness of social and environment issues associated with engineering practices.									
Course Outcomes (CO) with Bloom's Taxonomy Level										
At the end of the course, the students will be able to,										
CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description							
CO1	Understand the basic laws and concepts of Conduction, Convection and Radiation, Boiling and Condensation heat transfer.	II	Understanding							
CO2	Analyze problems of Radiation, Convection Heat Transfer and problems involving steady and transient state heat conduction in simple geometries.	IV	Analysing							
CO3	Evaluate the heat exchanger performance by using the method of log mean temperature difference and effectiveness methods.	V	Evaluating							
List of Experiments / Lab Activities										
List of Experiments:										
Following practical's should be considered for ISE and ESE evaluation.										
Experiments										
1. To find Thermal Conductivity of metal bar, insulating powder. 2. To find thermal conductivity of Composite wall and evaluate the performance of Pin fin. 3. To verify the Stefan –Boltzmann constant and find the emissivity of non-black surface. 4. To find the Heat Transfer coefficient in Natural Convection. 5. To find the Heat Transfer coefficient in Forced Convection. 6. Trial on Heat exchanger – parallel / counter flow. 7. To conduct the experiment on Pool Boiling, critical heat flux. 8. To find the Heat Transfer coefficient in Drop and film condensation. 9. Experiment on unsteady state heat transfer. Trial on compact heat exchanger and its performance										

Demonstration / Study	
1.	Heat Pipe Demonstration.
2.	Various applications of heat exchanger in process and food industries.
3.	Visit to / Demonstration of Heat exchanger manufacturing plant/dairy plant

Practical	2Hrs/Week	LA1	LA2	Lab ESE	Total
Interaction	--	30	30	40	100

Credits: 1

Course Objectives

- 1** To elaborate various techniques for measuring the dimensions of manufactured parts.
- 2** To explore the importance of measurement of various parameters of linear, angular and surface characteristics measurement.
- 3** To illustrate the knowledge to students on various concepts of metrology and manufacturing technology.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Use measuring instruments for various parameters measurement.	III	Applying
CO2	Calibrate and analyze metrological instruments used for linear, angular and surface characteristics measurements	IV	Analysing
CO3	Illustrate the knowledge to students on various concepts of metrology and manufacturing technology.	V	Evaluate

List of Experiments / Lab Activities/Topics

List of Lab Activities:

1. To calibrate micrometer using slip gauges.
2. To calibrate dial gauge using dial gauge calibration tester.
3. To measure angle by using sine bar.
4. To study and use of comparators.
5. To use optical flat for demonstration of interferometry.
6. To measure parameters of screw thread using floating carriage diameter measuring machine.
7. To inspect gear using gear tooth vernier caliper.
8. To use profile projector and Tool Maker's microscope.
9. To study and use surface roughness tester.
10. To study and use coordinate measuring machine.
11. To design and draw drilling jigs
12. To design and draw milling fixture

Course Objectives

1	To make the students to understand fundamental principles of plastics technology.
2	To provide the students the knowledge of new concepts like polymers, types of plastics and various plastic processing techniques.
3	To prepare the students to analyze / suggest implementation of plastics and polymer moulding methods.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO1	Understand different polymers and their characteristics.	II	Understanding
CO2	Articulate various plastic moulding processes.	III	Articulate
CO3	Analyse different types of plastic moulds and the design procedure for the same.	IV	Analyzing

Module	Module Contents	Hours
I	INTRODUCTION - Classification of materials, history of plastic materials, comparison of plastics with other engineering materials. Classification of plastics, thermoplastic, thermoset plastics, elastomers and polymers. Polymer structures, properties of polymers, additive methods to modify polymers	6
II	Commodity Thermoplastics - Properties - and applications of LDPE - LLDPE- HDPE, HMWHDPE- UHMWHDPE, Polypropylene, Vinyl plastics - Polyvinyl chloride, C-PVC, Polystyrene etc.	7
III	PROCESSING OF PLASTICS - Injection molding, extrusion molding, blow molding, rotational molding, vacuum molding, thermoforming, compression molding, resin transfer molding, calendaring process, etc. Secondary processes for plastics i.e. machining, joining, painting, etc. Defects during processing of plastic products.	8
IV	Design of Plastic Moulds Design of Compression moulds, different types of compression moulds, Multi-cavity moulds, Transfer moulds, Moulds heating principles and methods	7
V	PLASTICS RECYCLING AND WASTE MANAGEMENT - Applicability and statistics of plastics in various sectors. Issues and challenges with plastics. Impact of plastics on environment and its remedies. Utility of plastics wastes, waste management practices, plastic recycling processes. Case studies for recycling and waste management.	6
VI	Different plastic processing techniques Extrusion, Sheet extrusion, Profile extrusion, Calendaring, Blow Moulding, Thermoforming, Finishing and machining plastics, Equipments for extrusion, calendaring, blow moulding	6

CO-PO Mapping															
	Programme Outcomes (PO)												PSO		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3					2				2			2		
CO2					2										
CO3		2				1		1							
CO4															

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High
 Each CO of the course must map to at least one PO.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. V
Course Code	6ME312
Course Name	Advanced Strength of Materials
Desired Prerequisites:	Strength of Materials

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

1	To provide students a sound knowledge in strength of materials required to solve the problems in industry
2	To teach the mathematical and physical principles in understanding the linear continuum behavior of solids.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Explain the concept of theory of elasticity	II	Understanding
CO2	Analyse the deformation behavior of solids under different types of loading and obtain mathematical solutions for simple geometries.	IV	Analyzing
CO3	Show basic relations between stress and strains from the theory of elasticity perspective and use energy methods to solve structural problems.	III	Applying

Module	Module Contents	Hours
I	Introduction to stress analysis Assumptions and application of theory of elasticity, Body Force, surface force and stress tensor, The state of stress at a point, Normal, Shear and Rectangular stress components, Stress components on an arbitrary plane, Equality of cross shears	6
II	Analysis of stress Principal stresses, Stress invariants, Octahedral stresses, Cauchy's stress formula, Differential equations of equilibrium, Equations of equilibrium in cylindrical coordinates	7
III	Analysis of Strain Concept of strain, Deformations in the neighborhood of a point, Change in length of a linear element, Interpretation of shear strain components, Plane strains in polar coordinates, Compatibility conditions, Strain rosettes and Strain Measurement.	6
IV	Stress-Strain Relations Generalized statement of Hooke's law, Stress-strain relations for isotropic materials, Relation between the elastic constants, Plane Stress and Plane strain, Mohr's circles for the 3-D state of stress	7

V	Energy Methods Introduction, Work done in deformation, Reciprocity theorem, Castiglano theorem, Principle of virtual work, Principle of minimum potential energy, Rayleigh- Ritz method	6
VI	Shear Center Bending of Beams, Shear stress distribution and shear centre for thin walled open sections	6

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem V
Course Code	6ME313
Course Name	Composite Materials

Desired Requisites:

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

- 1** To understand the mechanical behavior of composite materials.
- 2** To get an overview of the methods of manufacturing composite materials.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Summarize advantages, applications of composites, and Effect of reinforcements.	II	Understanding
CO2	Outline usage, properties various laminates and its role and Manufacturing of composite materials	III	Applying
CO3	Evaluate mechanics of laminates.	V	Evaluating

Module	Module Contents	Hours
I	INTRODUCTION: Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance	4
II	Fibers- glass, carbon, ceramic and aramid fibers; Matrices- polymer, graphite, ceramic and metal matrices; characteristics of fibers and matrices.	4
III	Lamina- assumptions, macroscopic viewpoint, generalized Hooke's law, reduction of homogeneous orthotropic lamina, isotropic limit case, orthotropic stiffness matrix, commercial material properties, rule of mixtures, transformation matrix, transformed stiffness.	5
IV	Manufacturing of composite materials, bag moulding, compression moulding, pultrusion, filament welding, other manufacturing processes	4
V	Basic assumptions of laminated anisotropic plates, symmetric laminates, angle ply laminates, cross ply laminates, laminate structural moduli, evaluation of lamina properties, determination of lamina stresses, maximum stress and strain criteria, von Mises Yield criterion for isotropic materials, generalized Hill's criterion for anisotropic materials, Tsai-Hill's criterion for composites, prediction of laminate failure, thermal analysis of composite laminates	5
VI	Analysis of laminated plates- equilibrium equations of motion, energy formulation, static bending analysis, buckling analysis, free vibrations, natural frequencies	4

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem V
Course Code	6ME314
Course Name	PE-1 CAD/CAM

Desired Requisites: AutoCAD, basic drafting techniques etc.

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Credits: 3					

Course Objectives

1	To impart the knowledge on basic fundamentals, principles and working of various NC, CNC machines and CMM.
2	To explain the students about recent developments in CNC machines and part programming methods for CNC turning and milling operations.
3	To make students aware of different types of cutting tools for machining operations.
4	To develop the students for mathematical representation of geometries and different tolerance techniques.
5	To make students aware of computer use for data exchange formats and tools.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Explain appropriate operation and CNC machines for machining.	II	Understanding
CO2	Develop part programs for CNC machining.	III	Applying
CO3	Apply mathematical model to transform the geometries.	III	Applying

Module	Module Contents	Hours
I	Introduction to CAD/CAM and CNC Tools Automation in manufacturing, product cycle with and without CAD/CAM, Types of productions, Numerical control definition and history. Main components of NC system, NC Procedure, NC motion control system, Advantages and disadvantages of NC, CNC, DNC, etc. CNC machine tools, principle of operation of CNC, construction features including structure, drive system, tool-work movement actuation system, feedback system, machine control system.	4
II	Different components of CNC tools CNC Tooling- Different types of tools and tool holders used on CNC machines, parameters for selection of configuration of cutting tools, Modular tools and fixtures, use of pallets for work holding, palletizing of fixtures.	4
III	CNC Programming CNC Programming - Detailed manual part programming on Lathe and machining centres using G and M codes, APT programming-Punched tape in NC, tape coding and formats, APT language, Circular and linear interpolation, CNC programming - Tool length compensation, cutter radius	5

	compensation, sub routine, DO loop, Canned Cycle, etc. Optimization of tool path (to reduce machining time).	
IV	Geometric Modeling and Analysis Types of mathematical representation of curves, surfaces, Solid Representation - Boundary Representation (B-rep), Constructive Solid Geometry (CSG) and other methods, Feature Based Modeling, Assembly Modeling, Behavioral Modeling, Conceptual Design & Top-down Design, Modeling of product in CAE software and analysis techniques using approximation and matrix method. Data exchange formats like IGES, STEP etc.	4
V	Geometry Transformation Introduction and need of transformation, Mathematical models of Translation, scaling, reflection, rotation, homogeneous representation, concatenated transformation. Mapping of geometric model, visual realism, projections of geometric model.	5
VI	Computer Application in Design, Manufacturing and Analysis Collaborative Design, Principles, Approaches, Tools, Design Systems. Product Data Management (PDM), concurrent engineering, PLM concept.	4

AY 2023-24

Course Information

Programme	B.Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem V
Course Code	6ME341
Course Name	Mini Project 1
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Practical	2 Hrs./Week	LA1	LA2	Lab ESE	Total
Interaction	-	30	30	40	100
Credits: 01					

Course Objectives

- 1** To familiarize students with the concept of project based learning.
- 2** To give hands-on experience to students on developing problem statement and methodology to attempt solving such problems.
- 3** To learn the technical report writing skills.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Conceive a problem statement either from rigorous literature survey or from the requirements raised from need analysis.	II	Understanding
CO2	Design, and develop the model / prototype / algorithm in order to solve the conceived problem.	III	Illustrating
CO3	Write comprehensive report on mini project work	V	Organising

Course contents

Guidelines:

1. The mini-project is a team activity having 3-4 students in a team.
2. Mini project should include mainly Mechanical Engineering contents but can be multi disciplinary too.
2. The mini project may be a complete hardware or a combination of hardware and software. The software part in mini project should be less than 50% of the total work.
3. Mini Project should cater to a small system required in laboratory or real life.
4. It should encompass components, devices etc. with which functional familiarity is introduced.
5. After interactions with course coordinator and based on comprehensive literature survey/ need analysis, the student shall identify the title and define the aim and objectives of mini-project.
6. Student is expected to detail out specifications, methodology, resources required, critical issues

involved in design and implementation and submit the proposal within first week of the semester.

7. The student is expected to exert on design, development and testing of the proposed work as per the schedule.

8. Completed mini project and documentation in the form of mini project report is to be submitted at the end of semester.

Guidelines for Assessment of Mini Project Practical / Oral Examination:

Report should be prepared as per the guidelines issued by the department.

Mini Project shall be assessed through a presentation and demonstration by the student project group to faculty advisor / a panel of examiners.

Students shall be motivated to publish a paper based on the work in students competitions / Conferences / journals.

1. Mini Project shall be assessed based on following points;
2. Quality of problem and clarity
3. Proper use of knowledge and practices of mechanical and or other engineering disciplines.
4. Effective use of skill sets
5. Contribution of an individual's as member or leader
6. Clarity in written and oral communication

CO-PO Mapping

	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3		1		2				3			3	3	
CO2	2	2	3		2				3		3		2	1
CO3		3						3						1

The strength of mapping is to be written as 1,2,3; where, 1: Low, 2: Medium, 3: High

Each CO of the course must map to at least one PO, and preferably to only one PO.

Assessment				
There are three components of lab assessment, LA1, LA2 and Lab ESE. IMP: Lab ESE is a separate head of passing.(min 40 %), LA1+LA2 should be min 40%.				
Assessment	Based on	Conducted by	Typical Schedule	Marks
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 8 Marks Submission at the end of Week 8	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 9 to Week 16 Marks Submission at the end of Week 16	30
Lab ESE	Lab activities, journal/ performance	Lab Course Faculty and External Examiner as applicable	During Week 18 to Week 19 Marks Submission at the end of Week 19	40

Week 1 indicates starting week of a semester. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming, and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments and related activities if any..

Walchand College of Engineering, Sangli
(Government Aided Autonomous Institute)

AY 2023-24

Course Information

Programme	B. Tech. (Mechanical Engineering)
Class, Semester	Third Year B. Tech., Sem. V
Course Code	6OE329
Course Name	OE 1-Non Conventional Machining Processes
Desired Requisites:	

Teaching Scheme		Examination Scheme (Marks)			
Lecture	3Hrs/week	MSE	ISE	ESE	Total
Tutorial	-	30	20	50	100
Practical	-			-	
Interaction	-	Credits: 3			

Course Objectives

1	To learn about various nonconventional machining processes the various techniques, performance characteristics and their applications
2	To introduce students with various machine tools and their peculiars used for nonconventional machining.
3	To train the students to identify main variables of nonconventional machining processes and to judge their effect on developed products.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO1	Explain various nonconventional machining processes, tooling and equipment's required for various manufacturing applications.	understanding
CO2	Exploit the capabilities and applications of nonconventional machining processes.	Apply
CO3	Analyze effect of different parameters influencing on nonconventional machining processes and compare with other technique applications.	Analyze

Module	Module Contents	Hours
I	Introduction: Introduction to nontraditional machining methods -Need for non -traditional machining -Sources of metal removal, Classification on the basis of energy sources -Parameters influencing selection of process.	6
II	Mechanical Type AMPs: Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining – Ultrasonic Machining.(AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters– MRR- Applications	7

III	Thermal Type AMPs: Electric Discharge Machining (EDM)- working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications-Micro-EDM, Micro-WEDM.	7
IV	Chemical Type AMPs: Principles of Chemical machining and Electro-Chemical machining (CHM and ECM)-Etchants – Maskants -techniques of applying maskants - Process Parameters – Surface finish and MRR-Applications- equipments-Surface Roughness and MRR, Electrical circuit-Process Parameters- ECG and ECH – Applications	7
V	Medium Assisted AMPs: Laser Beam Machining: Material removal mechanism, types of Lasers, LBM equipment, process characteristics, applications. Electron Beam Machining: Basic equipment and metal removal mechanism, process characteristics, applications. Plasma Beam Machining: Machining systems, material removal rate, accuracy and surface quality, applications. Ion Beam Machining: Introduction, material removal rate, accuracy and surface effects, applications	7
VI	Advanced MPs: Basics and definitions: Principle of layer-based technology, advantages, classification. Rapid Prototyping Process Chain: 3D Modeling, Data Conversion and Transmission, Checking and Preparing, model building, post processing. Rapid prototyping techniques: Stereo lithography, Solid Ground Curing (SGC), Fused Deposition Modeling (FDM)	6

Assessment (for Theory Course)

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)
